

MOOER

GC-112

Speaker cabinet for electric guitar

Owner's Manual

Product description

The Mooer GC112 is a portable closed back speaker cabinet that houses a 1 x 12" Celestion V30. Constructed from 15mm Birch Plywood, the closed back design has tight focused lows, sweet mids and shimmering highs, with lots of forward throw. This teams up perfectly with the Mooer Tube Engine 20 or Mooer Baby Bomb 30 for a highly portable yet powerful amp rig.

Connection

The Mooer GC112-V30 guitar speaker cabinet has an impedance of 8 Ohm and can be loaded with a maximum of 60 Watts. Please note these values when connecting an amplifier. Please make sure that your guitar amplifier is switched off and its volume control is turned to zero. Connect your guitar amplifier to the input on the rear panel of the Mooer GC112-V30. Only use a speaker cable for this purpose. Now you can switch on your amplifier.

Specifications

- Closed Back speaker cabinet
- Loaded with 1 x 12" Celestion V30
- 15mm Birch Ply construction
- 60 Watts maximum rating
- 8Ω impedance
- **Size:** 600mm (L) x 483mm (H) x 270mm (D)
